

By their very nature Data Centres require a variety of noise control solutions to address the high levels of noise associated with the power generation and cooling requirements inherent in all Data Centres.

- Plant rooms,
- Server halls
- External plant compounds
- Roof Top Plant

All require noise mitigation options. Ventac design, manufacture and supply full turnkey acoustic solutions to meet any noise control requirements of Data Centres. We have the largest commercial acoustic lab in Europe where we fully validate all our acoustic solutions before final installation.

We work hand in hand with the design consultants to ensure the optimum acoustic solution is arrived at.

Acoustically Treated Fan Room

Ventac will work with the project consultants, contractors or the construction company to ensure all acoustic solution designs guarantee compliance and the required environmental noise levels are met.

Our range of solutions include the following

- Acoustic Screening
- Acoustic Enclosures
- Duct Attenuators
- Silencers & Splitters
- Acoustic Louvres
- Anti Vibration Mounts & Mats
- Flexible Acoustic Fan & Jackets
- Flexible Enclosures for Motors & Pumps
- Customised Acoustic Duct Lagging
- Temporary Noise Control Barriers
